Free and open source software (FOSS) is software that is distributed under a free software or copyleft license, including the GNU General Public License (GPL) and the GNU Lesser General Public License (LGPL). AutoCAD is published under the GNU General Public License version 2. Overview AutoCAD is a commercial application of CAD and drafting software, developed and marketed by Autodesk. AutoCAD, which stands for "Automatic Computer-Aided Drafting", was initially designed to allow users to draw architectural plans and architectural designs at the office or in the field. The current version, AutoCAD 2016, is designed for the personal and professional use of CAD designers. History AutoCAD was designed in 1981 by Kipp D. Kapp, a systems analyst, and published in 1982 as a desktop application. The name AutoCAD was adopted to describe a combination of "automatic" (software that automatically performs tasks) and "computer-aided" (graphics) in contrast to earlier CAD programs that used mechanical drafting techniques. AutoCAD for Windows was first released in 1992. In April 2003, AutoCAD for Windows was launched for the first time on Windows 95, XP and Vista systems. AutoCAD 2014 was first released in 2014, in the form of a Web App. AutoCAD 2015 was also released in this manner, and was in the form of an online software development kit. AutoCAD 2016 was released in May 2015 and is the current version. AutoCAD LT was released in 1991 and is still available for non-commercial use. It is designed as an entry-level CAD program for home or office use. The program is compatible with many operating systems, including Microsoft Windows, Microsoft Windows Server, macOS, and GNU/Linux. It has a free trial version that runs without advertisements for 30 days; a free student version; and a 30-day evaluation version that includes a trial of the software. A significant percentage of end users own AutoCAD as a perpetual license that is less expensive than purchasing every year. The professional version of

AutoCAD, which includes the LaserCAM software, costs $2,200. A single user can only have a single client license. The professional license is licensed per site and does not include cloud-based hosting or perpetual licensing. Autodesk's AutoCAD Business

There is an API for Python scripting, called Python for AutoCAD, a CPython based implementation that was added in AutoCAD R2013. It has a Python based scripting environment, which allows you to run and debug Python scripts. AutoCAD also includes a tabbed ribbon interface called the ribbon toolbar. This is unique to AutoCAD and replaces the familiar QuickDraw toolbar. This allows multiple users to use the program concurrently. Additionally, functionality that is restricted to one user at a time (such as the DesignCenter) can be shared amongst all users on a machine through a RemoteApp, or even published to the web as a web service. The ribbon was introduced in AutoCAD R2009 and has been improved in R2012. In R2016, the ribbon was fully revised and renamed into User Interface. The development of AutoCAD and its suite of AutoCAD-based software products was initiated in 1987. In that year, David B. Pohl joined AutoCAD as a technical consultant. He worked with D3P project leader, Bruce Duffy, to develop the original implementation of AutoCAD's ribbon interface. The initial version of the new interface was named AutoCAD Expert. It was released in 1988 with AutoCAD LT 1.0. In the film Star Trek Generations when Kirk lands on Earth and gets to the Intrepid, he sees a large aircraft just landing next to it. I thought it was the old footage of the USS Enterprise landing on the USS Intrepid. However, this footage has since been removed from Youtube. Is this indeed an actual aircraft, or is it just a stock footage used for the landing on Earth? A: This appears to be a stock shot of the Enterprise landing on the Intrepid (note that the ship on the right appears to be the USS Freedom) Image source While it's not explicitly stated, it's hinted at in the movie itself: The PADD displays a message "ATTENTION: EXPEDITION TO EARTH". The Intrepid flies over the unnamed planet and a series of shots of Earth's surface are intercut with shots of the Intrepid flying over the ocean. The footage appears to be a combination of stock footage and new footage shot specifically for this scene. Specifically, the Intrepid is flying over the ocean, rather than just over the planet. This looks like the Intrepid is landing on the USS Enterprise, which we see later in the film. HomeUncategorized30kg of pure grade A coffee and a surprise.
