JS Text File Merger is a simple utility that can do all that, when it comes to text files. For passionate SQL script writers this application could save a little time when having to multiple scripts one by one. Lightweight, and easy to use The application can run on virtually any machine. It's simple main window provides all the necessary options, with three columns that are the main concern. One where you have to browse in order to find the folder in which the desired files needed to be merged are located, the

next in which lie the contents of the previously selected folder, and the last which just shows the files that are going to be merged. However, caution must be taken at installation of the application, for when browsing for the desired folder, you will not be able to choose from anywhere else other than the root directory, if the files to be merged are placed in the same drive volume. Combining files in the blink of an eye Once you are ready to proceed, hit the "Merge files" button to start, and before you know it, the job is done. Literally before you know it, because there is nothing that informs you

when it has finished, except if you press the button again and you will be asked to replace the already existing file. To end with Taking everything into consideration we can say that JS Text File Merger knows how a job is done right. Its user friendly interface makes the application a fast way to merge multiple text files into one, making it a reliable partner, especially when having to do with SQL scripts. Free Software Any software review that leaves you with the impression that you have to pay for such programs, I usually omit from consideration. For me it's one of the things that always leaves a bitter taste in my

mouth, even if I do recommend a good friend to use a particular program. This is the reason why I do not leave reviews unless I can recommend the program with a positive note, which is the case here. PS: If you get a chance and find my reviews useful and informative, it would be awesome if you could leave a comment of your own to thank me for it. Thanks! The Software programs downloaded from the internet are known as web based applications, and you might have come across a few of them before. In the case of cloud-based programs, they can easily be used, either from a remote computer, or from any

device with an internet connection. There are many advantages to having a web based program, such as the fact that it is a lot faster, and easier to use. Most of these programs are free, so they are a great option for newbies as well, who do not have a lot of experience with this type of program. The first thing you need to do when looking for a web based program, is to
