

pbdownce 0.3.3.1 windows 7 Jun 11, 2015 02:46 PM Hello, I am new to Linux. I'm setting up pbdownce to work with mysql databases. Installed Centos 6 as a server. Everything works, but there is one problem. I use phpmyadmin to work with the database, but this plugin does not work with it. I am using pbdownce 0.3.3.1 with pb\_plugin\_php\_mysql plugin. The question is how to configure this plugin to work with phpmyadmin? Thank you in advance pbdownce 0.3.3.1 windows 7 Jun 11, 2015 03:36 PM Well, as if I think that it is not necessary, and it is not possible.
