I have been using this tool for quite a few years, when I first used it it was called Tcpan. It was simple, it worked, but I found that it couldn't scan all my configured ports, so I switched to other scanners. After awhile it stuck with me, and I think, I know that this one is the best one available. The port scanning thing is really simple and you don't need to be a rocket scientist to use it. And in my opinion it's worth the price. A good scanning program for the money. =====
