Comparison Projects Unified Project System (UPS) The Unified Project System (UPS) is an add-on to AutoCAD that allows users to work on projects with multiple parts. It is most useful for architects and engineers working on the design of structures, or for designers working on individual projects in coordination with other designers. UPS also allows users to work on multiple projects concurrently. UPS provides a simple interface for automatically drafting model sections, inserting notes and annotations, and configuring automatic name change settings. These features allow a user to easily see the progress of a project on a day-to-day basis. Further functions include managing the assembly of model pieces, preparing the final drawings, annotating and commenting on the drawings, and recording verification and revision history. UPS also allows users to create custom templates and macros that can be used to enhance the drafting process.

UPS is included in all new AutoCAD installations, and is available as a standalone download.
