A: You're performing a plain HTTP GET request. "" But there's a lot of confusion over what this means. One thing you can be sure of is that any one of those links (or any other that you find here) can't be the resource you want, because only the part after "http" and before "?page=3" is the part of the resource that will answer your question. I read this, on another site: HOW TO SEND UPDATES Enabling to automatically download content is a really great way to reduce bandwidth usage. We assume that users are smart enough to periodically use the media torrent downloads, and only prefer the torrent page to download updated packages. Now you can make the torrent page refresh its data when the update appears. How to enable this, is a separate question. It seems to be a feature of many sites that has fallen out of use over the years. I don't recommend you use this. To answer your question, this is the link: Raiden has two builds of the "raiden" 1.2.4.2: 1) "raiden" A 1.2.4.2, a stable build with no updates. 2) "raiden" A 1.2.4.2-beta, a beta release with minor updates. Raiden doesn't offer a "daily" build. I don't think anyone does. In this case, the one with "1.2.4.2" is the stable version. If you download it from "Silvi's gallery", it's at this link: I don't know if that link has the information to tell you the exact download time of the torrent. You might get lucky and find the torrent there. In which case you could simply disable all auto-downloads, and disable auto-refresh of that particular page. I repeat, it's not the recommended way to do this

the .Q: Spring: can only use setter or getter to access field I have this class: public class Q { private Date date; public void setDate(Date date) { this.date = date; } public void setDate\_lookup(Date date) { this.date = date; } public Date getDate() { return date; } } It uses Date field but I want that method getDate\_lookup() can use this field, and method getDate() can use Date field. What I do is: springBean.setDate(new Date()); springBean.getDate(); I got can only use setter or getter in this, any way to make getDate() and getDate\_lookup() have different setter and getter?

A: One approach is to create a wrapper class which implements both getDate and setDate methods. Something like this: public class Date

Your e-mail: Your URL: Comments: Enter the code that follows: Enter the code here: The lettering on this brand-new driver is smoother, and the picture sharper (once again, not a win, but a big improvement). Another consideration: I was using the software both in the Windows 98 and Windows Vista interfaces, so it's possible that the upgrade will make a noticeable difference on the other OSes (though you'd have to have the license key handy to try it). The problem: The Korg/Bossa is an attractive synthesizer, but it's not as easy to use as the VCS-2. In fact, the Bossa doesn't have a single, simple menu to cover its feature set. Perhaps to entice you, Korg/Bossa includes a built-in MIDI unit, which, of course, can be assigned to any channel, so that you can play, say, a drum pattern, on the Korg/Bossa, while recording it on your other MIDI device. To perform the sort of intricate MIDI recording, editing, and playback that the Korg/Bossa will enable, this is probably the most attractive synthesizer for you. My only hang-up: I can't shake the Bossa's positioning as a

beginner synth. This device is really user-friendly, but the simple menu and lack of on-screen help make it a little daunting. Adding this device to your arsenal probably requires a bit of exploring. And because the way this features is laid out is a little different than the other VST-based synths you're probably familiar with, you may get a little lost at first. It's safe to say, though, that the Korg/Bossa isn't just a synth; it's a complete music creation system. There are two digital effects processors built into the Bossa. The first one is a reverb, which sounds great at both low and high frequencies. The second one is a chorus, which sounds like a bit of space between notes. Both are very easy to use, and you can control the depth of the sound by using the reverb and chorus control knobs. The Bossa's full set of synthesizer
