The present invention relates generally to electronic pointing devices, and more specifically, to a pointing device which generates control signals using zero point error differences, known commonly as a pointing device to position a cursor on a screen. There is a current trend to find more efficient ways of communicating information to people who otherwise would not be able to see the data being communicated. In addition, the trend in input/output devices is towards smaller devices that require less time to transmit information. In particular, a microprocessor, the primary computational devices used in electronic data processing, can use a pointing device that is connected to the microprocessor via a microprocessor interface. The connection between the pointing device and the microprocessor interface is commonly achieved by a combination of a device driver and a time division multiplexed interface. The device driver is software that is used to control the pointing device and the time division multiplexed interface is an interface that permits data to be transferred between the driver and the pointing device in a time division multiplexed manner. The device driver and the time division multiplexed interface together form a serial port. The microprocessor interface, device driver, and serial port form a serial communication line and are collectively referred to as the serial port because they are each capable of transmitting and receiving information serially from the microprocessor. It is also common for the serial communication line to include cabling for a keyboard so the microprocessor user can communicate with the computer. One disadvantage of a serial communication line is that it can be slower than a parallel communication line. To compensate for this disadvantage, some systems increase the speed of the microprocessor by using hardware designed to accelerate the microprocessor. A typical pointing device,

- Minimalistic arcade puzzle gameplay - 20 different levels with increasing difficulties - Destroy the figures as you can - Collect other balls to increase the statistics - Short puzzle levels - Easy to play, hard to master - Support mobile devices and tablets - Leaderboard - Interactable with wall and background and other panels - Online help - No Ads - Optimized for mobile devices - Available on Android and iOS! Switch the ball in order to get through the gates. Hold the left thumbstick to switch the ball Shoot the ball and get through the gates Survive as long as possible in this pinball This is a 3D platformer/puzzle type game where you guide a ball by chucking at it. You have to control its trajectory and timing to smash to the ground. It's a combination of classic pinball physics and minimal control. Levels and hazards will try to bring you down. There are also traps and special walls you can use to your advantage, like bricks, boxes, and pillars. Controls: Press the left thumbstick down to place the ball. Press the left thumbstick left or right to turn the ball. Left trigger to chuck the ball Right trigger to hit the ball Press A to pause the game Press D to go back to a checkpoint and resume game Roll the ball in order to avoid the obstacles. The game will start with the ball, which will randomly go left or right. Avoid the obstacles by pressing the left thumbstick left or right. The more left you press, the quicker and longer the ball can roll. The longer the ball goes, the more it gets charged for one more move. Defeat the robot by juggling balls in the air. Tap the ball to let it fall, and tap the ball again when you see the green window. Collect the balls before they fall. If you don't tap them soon enough, they will go straight down. Survive as long as possible in this pinball This is a new kind of button-mashing arcade game where you control and grow a monster. You can play with different kinds of monsters. It's a combination of classic pinball physics and minimal control. Levels and obstacles will try to bring you down. It should be noted that it's pronounced "More-uh-Skay-Muh-Gee." However, the developer decided to go with "ma-sa-ki," the Englishized Japanese pronunciation. Murasaki Shikigami initially grew from the humble beginnings of a number of

other titles, including a side scrolling shoot 'em up game called Yappy. In Yappy, there were references and quotes that brought a serious tone to the game, similar to Zelda. In fact, the expression "Yappy" actually came from one of the quotes. The quote, "If you can not change your destiny, then it is your destiny," was used in the shooter but had never been used in a serious context before Yappy. Upon release, the game received relatively good reviews from the press, but by then, the concept of Maasaki Shikigami was solidified. It would be a cult classic free-to-
