This is the code that I have been using in vb.net... Dim guid As New System.Guid() MessageBox.Show(guid) C# is the only thing that I haven't converted to. I would like help in converting my code. I do not have access to Visual Studio. Thanks in advance, Kristopher A: Based on your comment it appears you are looking for the format: Guid.NewGuid().ToString("D"); Which will produce: f46ed8a3-50c7-431c-aa43-2f35e21837a4 I prefer to use the static property called: Guid.NewGuid() instead of using a variable of type Guid. It's shorter and easier to read. As for converting that string to C#, the right answer is @macky01's. Q: How to find good sleep positions? I want to sleep in the same position as I did last night and not wake up. Is there a scientific explanation for the best sleeping positions for us humans? What positions increase blood circulation in the head? A: I just wanted to add a few things to this that might help you avoid that habit. First, the best way to position yourself is to pick one position, then do it for the first night. Second, you should not sleep on your back. In the first month of my back pain recovery the times I did my best to sleep on my back during the first month were exactly the times I was in the worst pain. Third, if you must sleep on your back, sleep on your side. And here's a bonus: Don't sleep on your elbow. I remember when I was a teenager trying to sleep on my elbow and it was the worst position for me. (On the other hand, my arms were in the same position as they were in in the morning, so it wasn't too much of a problem... Except that it was the first morning where I was paralyzed, for want of a
