I have a 2011 Toyota Prius. The weather seems to be getting worse and worse, so I am being very cautious. Just found out that my car has been in the sun for a couple of hours, but with a windshield on. It has a screen so it is really hard to tell, but I can say with certainty that it is dark in the rear windows. What should I do? Should I go to the auto parts store and get something to put on the windows before it gets dark outside? Do I need to get it to a gas station to fix this? A: In my opinion, the only thing you can do is get it checked by a professional. Even if it isn't very hot out yet, you don't want to have it in the sun for more than a few minutes. If you just leave it out for a couple of hours (i.e. it's already getting dark out) you are going to ruin your car. At the very least, it will be harder to see out of and it will be harder to see things like your dashboard, lights, etc. Animal Planet: Life Begins At Z-score 50 ca3bfb1094
