"Purpose: To make our compressed natural gas (CNG) vehicles more efficient, safe, and economical to own and operate. "Filer: "In 2008, the Chevrolet Volt was the first practical plug-in vehicle to hit the streets. "Under the guidance of the Department of Energy, General Motors has continued to study and advance the Volt, while its unique technology is being put to work in high-mileage small cars, such as the 2012 Chevrolet Sonic.. "If the Volt represents the future, the Spark represents the next generation. These compact, fuel-efficient vehicles are designed and engineered with an emphasis on occupant safety, design and performance, and operate on pure battery power whenever possible. "Mark. Syracuse, N.Y. — There's little question that Gov. Andrew Cuomo has the power to craft a tough economic recovery program, but what the state needs to steer clear of is a blatant power play by the governor and the man he would appoint to a vacancy on the state Supreme Court. In short, Gov. Cuomo should stop putting his own nominee on the state Supreme Court as a nonvoter. A bill passed by the Legislature and signed last week by Cuomo will give the governor the power to appoint a judge to the court. But the governor is not allowed to name someone to the court as a nonvoter. So for the first time since the state Supreme Court was reorganized in 1968, this opening will go to the governor without giving the voters any voice.

Recent advances in methodology allow the noninvasive and objective measurement of nonlinear and time-frequency domain features of speech and speech-related vocal acoustics. This article introduces a speech-specific method to quantify this information in order to provide a reliable, objective description of speech at the phonetic level. Accordingly, a high spectral resolution time-frequency analysis of speech is proposed: a method to represent speech as time-frequency magnitudes and phase for each harmonic of specific spectral locations in the voice signal.1. Field of the Invention The invention relates to a current detection apparatus for detecting a current flowing in a wire. 2. Description of the Related Art A wire harness of an electric vehicle or a hybrid vehicle is installed in a vehicle in many cases. In a system for charging an electric vehicle, the wire harness of the electric vehicle is also used as a power supply line, and a relay and a relay driver are connected to the wire harness. Since a current to be supplied to the relay driver is as low as 0.1A to 0.2A in many cases, it is preferable to detect a current flowing in a wire. Japanese Patent Application Publication No. 2005-532095 (JP-A-2005-532095) and Japanese Patent Application Publication No. 2008-124460 (JP-A-2008-124460) disclose a method of detecting a phase current flowing in a wire. The phase current detection method disclosed in JP-A-2005-532095 and JP-A-2008-124460 detects a current flowing in a wire by measuring a phase difference between currents flowing in a plurality of inductors having coils wound around the same wire. However, there is the following problem with the phase current detection method. When the plurality of inductors are connected in parallel in order to increase a current flowing in the wire, if a current flowing in each of the plurality of inductors is assumed to be I , a total current in the wire may be assumed to be $I \times N$. In this case, a flow of a phase current in the wire is a sinusoidal wave whose half amplitude is $I \times 0.5$. Therefore, the phase current detection method cannot be applied to a current flowing in a wire whose half amplitude is less than $I \times 0.5$.
