Is there any way to do that in Linux, perhaps some smartctl command? A: Use smartctl. Running a sudo smartctl -a /dev/sda. (You will see some text that looks like the output of testdisk, this is just the results of smartctl getting your disk status). 12:04 As I have
many a times read
and heard such is an
excellent product
and should be
available at all

times. You just would like to be able to pick it up and use it even if you are not in the middle of the ocean or have no internet connection. Of course a

computer is plenty
fast enough to
download it from the
internet. A good old
fashioned short
stick/flash drive
should also do. So
be there kiddies and

more data in the
future please. Laurel
