Before AutoCAD, most CAD was done on the desktop, using wireframe drafting programs or "pencil-and-paper" drawings. In addition to a bitmap-based user interface, AutoCAD uses 2-dimensional (2D) vector graphics, to permit the user to "freeze" objects, show 3-dimensional (3D) drawings, and edit the geometry with snap tools. A "lock" feature allows a user to make changes to drawings without needing to save the file, and to undo changes. Drawing objects with the Pen and Line tool (left), and adding controls (right) using the Block Editor (AutoCAD) The User Interface AutoCAD is designed to support multiple users, which is accomplished through a user interface (UI) that is divided into two primary areas, "edit" and "draw." Each user in an AutoCAD session has their own "window" (or user interface) that occupies the entire computer screen. The controls for the user interface are independent of the application drawing, which means that each user can switch to a different drawing (or session) at any time. The user interface can be minimized, which opens up the entire screen for drawing and editing. The UI is composed of "widgets," small icons that operate in a similar fashion to a word processing application. The widgets of the interface are also independent of the application drawing, and can be used as part of any AutoCAD session. The drawing window can be reduced to the dimensions of the drawing (left), or hidden (center). The drawing is shown in a different layer (right). The interface provides several different options for specifying a scale, including zooming (enlarging or shrinking), panning, and rotating. Zooming in or out zooms the window so that the drawing appears larger or smaller, which is especially useful when drawing objects at a distance. Panning the window moves it left, right, up, or down, and rotating the window moves it left, right, up, or down. The application responds to the Ctrl, and the arrow keys, to rotate the view. The application responds to the Page Down key and the Arrow Keys to pan. The Left and Right arrow keys are used to change the view, which is displayed as a 3-D representation of the objects in the drawing. Using the up arrow key, the view can be rotated into a new position. The down arrow key can be

In the 2003 release of AutoCAD, a programming language named ObjectARX was introduced, which is also known as AutoLISP. ObjectARX is a language built on top of AutoLISP that permits writing customizations. ObjectARX is an alternative to AutoLISP for programmers to use. Windows Vista and Windows 7 AutoCAD LT, a cross-platform solution, was released in 2003. AutoCAD LT is designed for use on Microsoft Windows and Mac OS. AutoCAD LT is not suitable for commercial use, but is available for students, teachers, hobbyists, and freelancers. AutoCAD LT is compatible with AutoCAD R14 and later versions. AutoCAD LT (and AutoCAD) runs on Windows 98 and later. AutoCAD LT is used for the following: Architectural design Engineering Industrial design Mechanical design Building construction and engineering Electrical power design AutoCAD LT can be used on its own, or with AutoCAD Architectural Desktop for architectural design. AutoCAD LT runs on Windows Vista and Windows 7. AutoCAD Architectural Desktop (AD) is a Windows Vista and Windows 7-based (64-bit) version of AutoCAD with a new user interface (UI) and extra features, such as: 3D modeling tools Surface modeling Building section modeling tools MEP (mechanical, electrical and plumbing) drafting tools Roof section drafting tools Ironworkers' planning tools Furniture options Data management 3D project management Autodesk has begun to make AutoCAD LT and AutoCAD Architectural Desktop (AD) available for Windows XP. AutoCAD LT and AutoCAD Architectural Desktop (AD) are available for Apple Mac OS X (Snow Leopard, Lion and Mountain Lion) and Adobe Photoshop Elements 8 and 9. Linux The Linux version of AutoCAD LT runs on 32-bit and 64-bit x86 and x86-64 Linux distributions such as Ubuntu and Fedora. It also runs on IBM AIX and Microsoft Windows. To perform CAD tasks such as drawing and dimensioning, a PC running Linux is required. Mac OS X AutoCAD LT is available for Mac OS X 10.4 and later versions. The latest version, AutoCAD LT (2010) is part of the "Macintosh application runtime" and "Auto af5dca3d97

Capri, Italy (CNN) — One of the most luxurious and iconic holiday resorts in the world, with elegant villas, a world-class beach and Leonardo DiCaprio's favourite haunt, the Carlton Tower, Capri has long been a favored location for decadent gatherings. Thanks to the recent auctions of several of Capri's most opulent villas, there are new details on the rich and famous who have gone "abroad to Italy" for their gala gatherings and other festivities. The 13 villas that were sold in the past week at Sotheby's and Christie's auction houses, include the home of a Russian billionaire and his family (also discovered by CNN). Another residence was the home of an American fashionista known for her extravagant parties. In addition to wealthy Russians, the homes of other famous American actors and musicians are also for sale in the Italian island. The house where Martin Scorsese lived with his family was sold for $6.4 million to an American investor who wants to use it as a movie production center. Actress Brigitte Bardot also loved the Carlton Tower and the villa where she lived is now for sale at $5.5 million. Beach living News of the more recent sale comes as several of Capri's residences have recently come on the market for far less than their original sales prices. The home of Edoardo and Luisa Beuys, which sold in 2008 for about $8.8 million, is now on the market at $2.8 million. The Carlton Tower, with views of the Mediterranean sea, is for sale for $10.5 million. Both are in the heart of Capri's most glamorous residential area. The villa is so in demand, it has been the subject of more than a dozen property searches in the past three years, according to the most recent estimates from the Real Estate agency, Sanctions. In recent weeks, the house sold at Christie's for €8 million (about $10.5 million) and at Sotheby's for €3 million (about $3.8 million), according to reports in the Italian press. Several homes have sold in this area in recent years for less than the €10 million Sotheby's paid. The top-selling residence in Capri's residential district was bought by an Italian industrialist in 2008 for €6.8
