AutoCAD Architecture Drawing 1-1 In the AutoCAD Architecture drawing 1-1, you can see that the most basic elements in AutoCAD are the drawing space. The drawing space is a white box that represents the entire drawing area and everything within it. In the first drawing space, you can see that the solid blocks and lines are enclosed within the drawing space. The dline command is used to draw the outline of the drawing space. The blocks are simple squares called AutoCAD units. The AutoCAD units are two-sided and can be reversed. To turn off a unit, press the n or b key to toggle between left- and right-handed AutoCAD units. The dline command is used to draw a line on the screen that represents the outline of the drawing space. To make AutoCAD units, you must enter coordinates. In the first drawing space, the xy coordinate system was not created; it was created automatically. The x-axis runs from left to right and the y-axis runs from the bottom to the top. The xy coordinate system is a two-dimensional coordinate system that is used to specify locations in the drawing space. The first line in the drawing space represents the x-coordinate and the second line represents the y-coordinate. The lines are joined with the line command. The line command is used to join two lines in the same drawing space. The first line is an ordinary line in the drawing space that connects the left and
